

Domain: Applied Data Science

Project: Car Resale Value

Prediction Team Size :5

Team Leader: Vasipalli Nithin Bharath Reddy

Team Members: Venkata Sahith Andey ,Rekkala Gowtham  
Reddy ,PSS Rohit Varma ,V Pavan Varma

## Project Design Phase-I

### Proposed Solution Template

#### Proposed Solution Template:

Project team shall fill the following information in proposed solution template.

S. No	Parameter	Description
1.	Problem Statement (Problem to be solved)	<p>Machine learning has become a tool used in almost every task that requires estimation. Companies like cars24 and cardekho.com uses Regression analysis to estimate the used car prices. So we need to build a model to estimate the price of cars. The model should take car- related parameters and output a selling price. The selling price of a used car depends on certain features as mentioned below</p> <ul style="list-style-type: none"><li>• Fuel Type</li><li>• Manufacturing year</li><li>• Kilometers Driven</li><li>• Number of Previous Owners</li><li>• Maintenance Record</li></ul>
2.	Idea / Solution description	<p>This project aims to deliver price prediction models to the public, to help and guide the individuals looking to buy or sell cars and to give them a better insight into the automotive sector. Buying a used car from a dealer can be a frustrating and an unsatisfying experience as some dealers are known to deploy deceitful to close a deal. Therefore, to help consumers avoid falling victims to match tactics, this study hopes to equip consumers with right tools to guide them in their shopping experience.</p> <p>Another goal of the project is to explore new methods to evaluate used cars prices and to compare t their accuracies.</p>
3.	Novelty / Uniqueness	<p>As there are so many ongoing experiments that use statistical approaches and some traditional methods to focus on predicting item sales.</p> <p>Most researches have experimented by taking single algorithm to predict sales. In this thesis Machine Learning algorithms such as Simple Linear Regression, Support Vector Regression, Gradient Boos4ng algorithm, and Random Forest Regression are considered for predict the most effective metrics such as accuracy, mean absolute error, and max error are</p>

		considered for measuring algorithm efficiency. This method will be very beneficial in the future for advanced item sales forecasting,
--	--	---

4.	Social Impact / Customer Satisfaction	In the study, the variables having significant effects on the price of the second hand car were determined. A prediction model was established with these variables. The coefficient of determination (R <sup>2</sup> ) of this model was calculated as 89.1%. The variables included in the estimation model are Brand, Model, Model Year, Fuel Type, Horse Power, Kilometers, Manual Air Conditioning, Fog Lights, Seat Air Cushion, Leather Steering Wheel, Wheel Rim, Automatic Air Conditioning, Start Stop, Rain Sensor, Sunroof, Electric Folding Mirrors, Xenon Headlight, Knee Airbag, Upholstery Leather, Memory Seat, 4X4, Parking Assistant, Vacuum Door.
5.	Business Model (Revenue Model)	Deciding whether a used car is worth the posted price when you see listings online can be difficult. Several factors, including mileage, make, model, year, etc. can influence the actual worth of a car. From the perspective of a seller, it is also a dilemma to price a used car. Based on existing data, the aim is to use machine learning algorithms to develop models for predicting used car prices.
6.	Scalability of the Solution	<p>We started with understanding the use case of machine learning in the Automotive industry and how machine learning has transformed the driving experience. Moving on, we looked at the various factors that affect the resale value of a used car and performed exploratory data analysis (EDA). Further, we build a Random Forest Regression model to predict the resale value of a used car.</p> <p>We could have also used simpler regression algorithms like Linear Regression and Lasso Regression. Still, we need to make sure there are no outliers in the dataset before implementing them.</p> <p>Pair plots and scatter plots help visualize the outliers</p>
